## KEY BENEFITS

### Intuitive Interface

The ARAT risk assessment tool is not intended only for security officers, but also for process owners, management, and auditors. The tool provides a clear overview of security risks and required financially justified actions.

### Rich, Interrelated Catalogue of Assets, Threats, Vulnerabilities, and Impacts

Assets, risks and vulnerabilities are defined by international catalogues and Astec best practice. The tool contains an embedded log list that can be used jump start the risk assessment. Users can add their own logs anytime.

### Top Level or Detailed Risk Assessment

Depending on the purpose and available time, security officers can choose between risk assessment in terms of asset groups or in terms of individual assets.

### Risk Level

Based on the event frequency and impact type and value, risk assessment is automatically calculated. If the risk level is high, security officer proposes actions to reduce the risk.

### Financially Justified Action Plan

The final plan and report provide information on actions taken to reduce the risks, risk levels, costs, owners, action deadlines, information assets, and threats.

### Insightful Dashboard

The insightful dashboard gives the management an overview of the most critical processes, assets, threats, and actions. Comparison can be made between different risk assessments, which gives you the opportunity to monitor improvements in risk management.
